Mr James,

Here are the pics. This just arrived today and was damaged in shipping, so I'm going to send it back. In the last pic, you can see the drivers side end, with the pressure/liquid fitting (sorry if thats the wrong term) near my hand is close to the 83 location, but the suction/vapor connection is extended to get aft of the oil cooler, and is clear at the bottom.

After talking to you, it looks like I'd be better off getting your PF condenser kit. Are you expecting to carry the kit in the future?

Wade
