Keyword

Recording Method

This software records images for a few seconds before or after the motion is detected on the image.

☒ Before motion is detected

Record images for 20 seconds.

☒ After motion is detected :

Record images for 60 seconds.

Threshold to start recording

Adjust the threshold to start motion detection recording.  
The lower the threshold is, the more sensitive the threshold to start recording becomes.

Low

High

Sensitivity

If you set the threshold high, the motion is sensitively detected through the motion detection bar.

Low Sensitivity

High Sensitivity
